What is COVID-19 (Coronavirus)?

Coronaviruses are a large family of viruses. Some cause illness in people and others cause illness in animals. Human coronaviruses are common and are typically associated with mild illnesses, similar to the common cold. COVID-19 is a new disease that has not been previously identified in humans. Those who are infected with COVID-19 may have little to no symptoms. You may not know you have symptoms of COVID-19 because they are similar to a cold or flu. Symptoms may take up to 14 days to appear after exposure to COVID-19. This is the longest known infectious period for this disease. Symptoms have included fever, cough, difficulty breathing and pneumonia in both lungs.
